

Planning

- Requirement finalization
- · Updates & new changes
- · Architecture & design
- Task assignment
- Timeline finalization

Code

- Development
- Configuration finalization
- · Check-in source code
- · Static-code analysis
- Automated review & peer review

Build

- · Compile code
- · Unit testing
- Code-metrics
- Build container images or package
- · Preparation or update in deployment templated
- · Create or update monitor dashboards

Test

- · Integration test with other component
- Load & stress test
- · UI testing
- · Penetration testing
- · Requirement testing

Release

- · Preparing release notes
- · Version tagging
- · Code freeze
- Feature freeze

staging, production Verification on deployment i.e

smoke tests

· Updating the

infrastructure i.e.

Deploy

Operate

- · Monitor designed dashboard
- Alarm triggers
- · Automatic critical events handler
- Monitor error logs

BENEFITS OF CI/CD "COST"

- Less developer time on issues from new developer code For Example: Catch Compile Errors After Merge.
- Less infrastructure costs from unused resources For Example: Automate Infrastructure Cleanup.

- Less bugs in production and less time in testing
 For Example: Catch Unit Test Failures.
- Prevent embarrassing or costly security holes For Example: Detect Security Vulnerabilities.
- Less human error, Faster deployments
 For Example: Automate Infrastructure Creation.

BENEFITS OF CI/CD "REVENUE"

- New value-generating features released more quickly
 For Example: Faster and More Frequent Production Deployments.
- Less time to market
 For Example: Deploy to Production Without Manual Checks.

- Reduced downtime from a deploy-related crash or major bug For Example: Automated Smoke Tests.
- Quick undo to return production to working state For Example: Automated Rollback Triggered by Job Failure.
